

Smart Deposit App

- The mobile solution for banks and CITs -

The patented Smart Deposit solution digitises the entire process, enabling prepared deposits to be entered with a few clicks via a mobile app.

The challenges

Envelope deposits are tiresome for users, who have to fill in their deposit information manually. Processing the deposits is also time-consuming and can be a source of errors as the information on the deposit slips is reentered.

The solution

Smart Deposit is a secure, easy-to-use mobile app available for iOS and Android, giving users a rapid means of entering their prepared deposit envelopes before leaving them in a dropbox in a shop or a bank branch. Depositors only need to save their information once, when they create their user account. Prepared deposits are then finalised rapidly, by simply entering the quantities of coins and notes in each denomination. The information is then sent in a secure digital format to the bank's back office, which will then credit the prepared deposit amount once the envelope has been dropped in the safe. The stock in terms of volume and value in each safe can then be tracked in real time via the Smart Safe Monitoring Platform, to optimise emptying.

- ✓ Envelope barcode scanned using the mobile app
- ✓ Back-office application for the bank and/or the CIT
- ✓ Information on deposits sent automatically in banking format
- ✓ Deposit tracking and history functions for retailers
- ✓ Instant credit based on announced amount and CIT count reconciliation

The benefits

- ✓ The innovative solution for digitizing the deposit management process announced "Smart Deposit" has been the subject of a patent application.
- ✓ The ergonomic and intuitive interface allows you to create a user account and enter your ads in just a few clicks, without any prior training. The Universal Platform back-office application allows easy management of users, sites, safes, etc.

The functions

- ✓ User accounts created online using an ID and password
